GRAPHS and CHARTS

Information and data that students gather in the lab or the classroom can now be presented graphically on the computer screen and printed.

With *SuperScience Graphs and Charts*, students first collect data—anything from the rainfall for a month to their classmates' favorite flavor of ice cream. They then enter the data into one of five different kinds of graphs and charts:

- Bar Graphs
- Pictographs
- Tables
- Line Graphs
- Pie Charts

Students can then convert the results into the four other types of graphs and charts and see how the data appears in different formats. They learn not only how to present information effectively but discover how the same data can be displayed in different ways.
